

N^o 19,482

A.D. 1899

Date of Application, 28th Sept., 1899

Complete Specification Left, 12th May, 1900—Accepted, 4th Aug., 1900

PROVISIONAL SPECIFICATION.

Improvements in Fastenings for Surgical Bandages and the like.

We, EDMUND LLOYD PHILLIPS PARKER, of Castle Donington, in the County of Leicester, Chemist, and HARRY MOUNTFORD WOOD, of High Street, Draycott, in the County of Derby, Surgical Instrument Maker, do hereby declare the nature of this invention to be as follows:—

5 Our invention is chiefly designed for use in securing surgical bandages, but as will be readily understood upon referring to the description of same it may be applied to other similar purposes.

10 In carrying out our said invention we employ two pieces of metal or the like hinged together upon one side and carrying teeth notches or their equivalents upon their meeting faces adapted to pass into or through the material; at the opposite side the said pieces are fastened together in any suitable manner such as by a catch or clip of any suitable description, the lower of the two pieces is laid upon a fold of the bandage or the like and another turn of said bandage is made thereon, the upper part is now turned down and secured by means of the catch
15 or clip; any suitable device being provided such as a projection on the clip or catch end of the bed plate for opening same when desired.

It is evident that any desired form of tooth, notch or roughening may be employed upon the meeting faces and also different forms of hinges or catches at the opposite ends of the pieces without departing from the spirit of our
20 invention.

Dated this 27th day of September 1899.

W. SWINDELL,
Agent for the Applicants.

COMPLETE SPECIFICATION.

25 **Improvements in Fastenings for Surgical Bandages and the like.**

We, EDMUND LLOYD PHILLIPS PARKER, of Castle Donington, in the County of Leicester, Chemist, and HARRY MOUNTFORD WOOD, of High Street, Draycott, in the County of Derby, Surgical Instrument Maker, do hereby declare the nature of this invention and in what manner the same is to be performed, to be
30 particularly described and ascertained in and by the following statement:—

Our invention is chiefly designed for use in securing surgical bandages, but as will be readily understood upon referring to the description of same it may be applied to other similar purposes.

35 In describing our invention reference will be had to the accompanying sheet of drawings upon which Figure 1 is a plan of one of our improved devices:

[Price 8d.]

Parker and Wood's Impts. in Fastenings for Surgical Bandages and the like.

Figure 2 is a section of same on line *a a* of Figure 1.

In carrying out our said invention we employ two pieces of metal or the like A, B, hinged together upon one side or end at C and carrying teeth, notches or their equivalents, D, D¹ upon their meeting faces adapted to pass into or through the material; at the opposite side or end the said pieces are fastened 5 together in any suitable manner such as by a catch or clip E of any suitable description, the lower of the two pieces is laid upon a fold of the bandage or the like and another turn of said bandage is made thereon, the upper part is now turned down and secured by means of the catch or clip; any suitable device being provided such as a projection F on the clip or catch end of the plate A for open- 10 ing same when desired.

It is evident that any desired position for or form of tooth, notch or roughening may be employed upon the meeting faces, and also different forms of hinges or catches at the opposite ends of the pieces without departing from the spirit 15 of our invention.

Having now particularly described and ascertained the nature of our said invention, and in what manner the same is to be performed, we declare that what we claim is:—

The improved fastening device consisting of two hinged pieces with roughened, notched or toothed meeting faces and clip or catch substantially as and for the 20 purposes described and illustrated.

Dated this 11th day of May 1900.
